📁 PROJECTS

Hospital Patients Management API ⤢
I have developed a hospital patient management API integrating multiple databases for various hospitals, enabling comprehensive patient records and test report access, enhancing doctor's and patient's ability to track medical histories efficiently.

University Alumni Website ⤢
Developed an alumni website for a university, featuring a multi-tier admin system with a Super Admin and Department Admin roles. The Super Admin approves Department Admins, who then manage member registrations. Designed and implemented admin panels for both user levels, ensuring efficient management and approval processes. Additionally, created a user interface that displays detailed departmental information, allowing members to access comprehensive data upon login.
